

BEFORE YOU BUY – FAQ

HOW MUCH YOU CAN EARN?

This is not simple question. Your future earnings depends to your engagement, learning skills and initial time you spend to build your little application empire. To make money you need to have userbase, to get userbase you need to have apps with implemented methods from this course.

Mostly, my course members are making stable \$50 – \$100 / day, some of them making more than \$100. There is also group of people who are making few hundreds / day and it's stable. One of members crossed \$2000/day.

How long it will take to see money?

-2-3 weeks for learning

-1-2 weeks for working

Then you will see first money but amount depends to your luck, skills, niches and your personal work. Some people start from \$10/day but there are luckers who started with \$100/day.

EARNINGS USING METHOD FROM OUR COURSE:

**SOME EARNINGS PROOF BY OUR COURSE MEMBERS WITH THIS METHOD
SOME GUYS ARE MAKING FEW HUNDREDS/DAY BUT I DON'T HAVE
PERMISSION TO POST SCREENSHOT**

IS IT LEGAL IN YOUR COUNTRY?

It is legal in every country, we are doing white hat, gray hat but never breaking any law. We are just breaking Google Play policy but never breaking law or harming user wallets or phones.

Don't worry, every method from this course is legal. Not moral but legal.

DO YOU NEED PROGRAMING SKILLS TO USE THIS COURSE?

Yes and no. I don't demand from you to become some programmer or coding guru. All you need to know is how to use Android Studio and how project structure looks, just understand overall how app is build to copy method from course and understand how to use it. Only basics are needed, so I will require from you to make:

- hello world application
- some calculator apps from tutorials

Just to understand how the process works.

We are not using any generators like Andromo because we cannot put our custom code inside

You can use:

- flutter
- html5/ionic
- unity3d
- basic4android
- or just standard Android Studio

This is not coding course, you can learn a lot more with free materials you can find everywhere in Google. However, I need to explain you what you need to know before you can start real reskin job and making money. I've choosen free materials that can help you to understand how application works.

STEP 1 – HELLO WORLD

After installing Android Studio from previous lesson, you need to create your first app to understand the structure and how application works

<https://developer.android.com/training/basics/firstapp/index.html>

STEP 2 – LEARN ANDROID STUDIO INTERFACE

This free course from Google will show you the interface of

Android Studio, required to work with this program in the future

<https://eu.udacity.com/course/android-basics-user-interface-ud834>

STEP 3 – MORE FREE COURSE FROM GOOGLE

<https://developers.google.com/training/android/#for-new-programmers>

STEP 4 – THE JAVA

Android development uses java language, very similar to C#. If you are familiar with C#, you don't need to make this step. However, if you have never coded any application in modern programming language, you need to know basics:

<https://www.androidauthority.com/java-tutorial-beginners-2-582147/>

<https://beginnersbook.com/java-tutorial-for-beginners-with-examples/>

You need to know:

- what is object oriented programming
- what is variable, constant, method, class
- what is if/else condition
- loop basics for/while

It's not required for reskin but it's a lot of easier if you can understand these definitions and can use in simple Android app.

STEP 5 – BUILD A SIMPLE CALCULATOR APP WITH ANDROIDAUTHORITY

Nothing will show you better how to code, than first application from step by step tutorial. AndroidAuthority site is good tutorials base, I will not copy their tutorial here, because it's not programming course but you can build your app yourself.

<https://www.androidauthority.com/build-a-calculator-app-721910>

/

After making this app (**NOT CTRL+C/V!**) You will be able to make reskins.
